

Project Management Information Systems

We help you develop a customized project management information system that will put critical information at your fingertips and allow the monitoring and control of key project activities, ensuring your projects are delivered on time and within budget.

Project Management Information System (PROMIS)

Today's projects need to deal with increasing amounts of information that require better tools to help navigate through all the data produced by projects. Our services include the development of customized project management information systems that can help track project progress as well track the projects log frame indicators.

In partnership with experts in the development of information technology systems, we help your organization or your project develop the functional and technical requirements that can support the processes and methodologies developed for your organization.

Solutions range from web based to network (server/client) based solutions that allow the entire project team to interact with the system and reduce the time to process information. We work with your team to develop the system architecture that reflects the best practices for managing data and help you get the information you need to make the right decision at the right time.

Integrated System

An integrated system, that puts critical the project information available to your organization management and your project team, provides the following benefits:

- Performance information about your project
- Appraisal of the project's logframe inputs and outputs
- A clear perception of the planned & actual impact of the project
- An understanding of the rate of progress of the project to its final goal
- Control on tasks assignment and progress reports
- Improves the timelines of reports to donors and all stakeholders.
- Allows information transparency and accountability for results
- Supports strategic planning and better alignment of resources

Monitor Project Indicators and Performance

Monitoring all aspect of a project is a key element to ensure the project is on track, our approach to monitoring systems include:

- Monitor data from process and activity indicators to track calendar progress by each one of the project interventions.
- Monitor data from budget expenditure to track high level budget expenses and monitor the progress of activities and results with the associated cost with them.

Our Coaching Services

- Use of executive dashboard for decision making and to facilitate the quick detection of problem indicators with the ability for “drill-down” to analyze in more detail the data.
- A graphical dashboard with the use of charts and graphs to quickly help identify program progress by program goal, the visualization of data helps manage the decision making process without the need to analyze lengthy data reports and spreadsheets.

Organization’s Projects, Programs and Portfolio

Our solutions allow development organizations to have a better control and management of the project information, which enables better decision making:

- Use a portfolio management approach to monitor multiple projects. Managers obtain a clear overview of multiple projects or programs, can drill down for details and report on results.
- Improve the allocation of project resources by monitoring inputs, managing team roles, administering contracts and donations, allocating resources, tracking human resource information and providing the organization management with access to project information.
- Monitor project results with results-based management features. Based on organizational level goals and indicators, managers can monitor progress relating to portfolios, programs and projects.
- Manage project budgets, schedules and scope across all projects, programs and portfolios.
- Consolidate all project information by aggregating project data from multiple sources to develop complete project progress reports to donors and key stakeholders.

Online Collaboration

Our solutions include the development of project information collaboration systems by using web technologies that helps the project team stay connected and productive by providing easy access to the people, documents, and information they need to make more informed decisions and get the job done:

- Centralization of all project information and documents with document management capabilities including the ability to view revisions to documents and restore to previous versions, and the control access security.
- Communicate project information and documents with easily updated postings, news archives, notifications and publications to all relevant stakeholders.
- Connects teams with the information and resources they need. Giving users the ability to create team workspaces, coordinate calendars, organize documents, and receive important notifications and updates through communication features including announcements and alerts, as well as the ability to create their own blogs and wikis.

We help you in all the steps to develop and implement the M&E System (ICT) from the initial assessment, review, strategy development, design, specification, development/customization, roll-out/capacity building and training.

Extending the Capabilities of Project Management

PM4DEV consultants understand how you do your work. And, our satisfied customers confirm that we're uniquely positioned to help you achieve measurable success by utilizing a unified approach that combines:

- **Reliability.** PM4DEV works closely with you to ensure a successful project outcome. Our job isn't finished until we've achieved your goals.
- **Expertise.** No one understands PM4DEV products like the people who build them. PM4DEV consultants have the necessary knowledge and resources to guarantee your project success.
- **Methodology.** Our proven processes and methodology were developed during successful engagements allowing PM4DEV professionals to work with maximum speed to efficiency.

PM4DEV can provide flexible system solutions tailored to the unique needs of your organization. Our consulting services will enable you to quickly take advantage of the many benefits of our project management expertise.
